

Z-TRAK2 S-2K SERIES

Factory Calibrated High-Performance 3D Profile Sensors

FEATURES

- Scan speed 45K profiles/sec, 2,000 points/profile
- Factory calibrated real-time measurements in real-world units
- Unified Measurement Space for 360° in-line inspection and measurements
- Handles highly reflected surfaces
- Built-in reflection compensation algorithms
- Multi-Sensor synchronization
- Simplified cabling
- Compact IP67 housing for harsh operating environments
- Free bundled software:
 - Sherlock™ for rapid application deployment
 - Sapera LT SDK for scan and control
 - Sapera Pro run-times
 - 3rd party software support for 3D image processing

The new Z-Trak2 family of 3D Profile Sensors delivers 45,000 profiles/sec for in-line measurement and inspection applications.

The Z-Trak2 S-2K Series combines speed and performance with easy to use software to deliver highly accurate, real-time results for a wide variety of 3D measurement and inspection applications in electronics, PCB, wafer, flat-panel, factory automation, food processing, and secondary battery markets.

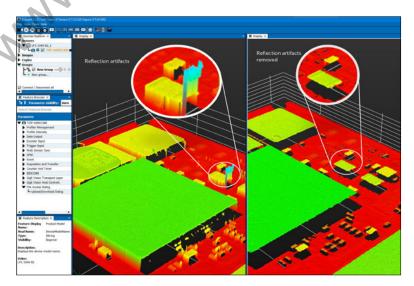

The Z-Trak2 S-2K Series delivers 2K points per profile with a larger FOV and scan speeds beyond 45K profiles/sec. Combined with its hardware-based reflection compensation algorithms and single-scan HDR capabilities, the Z-Trak2 S-2K Series supports a variety of FOVs with blue and red laser configurations.

HIGH DYNAMIC RANGE (HDR) IMAGING

Powered by Teledyne's 3D image sensor technology, the Z-Trak2 family features built-in single-scan HDR capability. This allows Z-Trak2 to scan objects made of highly reflective surfaces like machine aluminum/glass and low reflectivity materials like rubber, plastic, etc. at the same time. The HDR capability helps reduce processing complexity and time, thereby improving system efficiency.

REFLECTION ELIMINATION AND IN-LINE PROCESSING

Z-Trak LP2C features in-line processing capabilities to improve and enhance the profiles. In addition, it can generate additional meta data that can be used by up-stream algorithms to eliminate unwanted reflections. Cleaner 3D scans help applications produce accurate and dependable results.

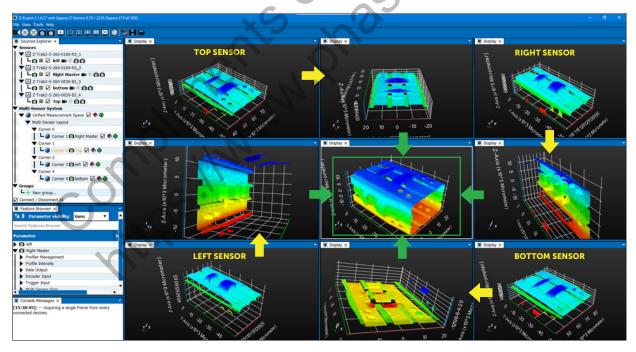

MULTI-SENSOR CONFIGURATION AND UNIFIED MEASUREMENT SPACE (UMS)

3D inspection applications requiring 360° views, thickness measurement, an extended horizontal field of view without sacrificing the z-resolution or removing occlusion etc. require the combination of multiple profile sensors.

Combining and synchronizing multiple Z-Trak LP sensors helps create a Unified Measurement Space so that applications view the resulting 3D measurements from the point of view of the entire system. The 3D applications benefit from consistent, accurate and easier to handle object measurements and for added flexibility, the Z-Trak LP architecture also enables models with different measurement ranges and laser colors to be combined.

Z-TRAK UNIFIED MEASUREMENT SPACE

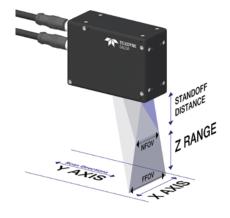

Z-EXPERT 360° View Using 4 Synchronized Z-Trak Sensors

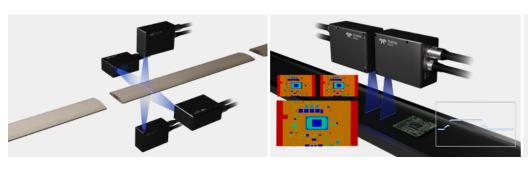

SPECIFICATIONS¹

Function	Description		
Scanning Rate	AOI: Up to 45,000 profiles/sec		
Connectors	1 x M12 17-pin: Controls 1 x M12 8-pin X-Coded: Data Ethernet port		
Image Enhancements	Single scan HDR Reflection elimination Specular configuration Filters: programmable median Horizontal and vertical flip Unified Measurement Space		
Multi-Sensor Sync	Single low-cost wiring using off-the-shelf network switches Sensor grouping Configuration wizard to ease timing setup		
Lasers	Red: 660n m 2M or 3R Blue: 405 nm 2M or 3R		
Reflectance Management	Time integration Laser power control: Automatic or manual Gain control		
Output Format	Individual profile, range map and 3D point cloud Depth (Z), Lateral (X), Reflectance (R) or Laser Peak Width (W) GenlCam 3.0 (SFNC 2.3) compatible 3D Data output formats compatible with Calibrated Z; Rectified Z, Calibrated ZR/ZR+W Native values and world units (microns/mm/inch) I6-bit mono (1D line-scan mode) J0-bit mono (2D area-scan mode)		
Temperature	Storage: • -40°C to +80°C (-4°F to +176°F) temperature • 20% to 80% non-condensing relative humidity • Operating: • 10°C (50°F) to 50°C (122°F) • Relative Humidity: up to 90% (non-condensing)		
System Requirements	• 5, 2.5 or 1 Gigabit Ethernet • 4 GB or higher system memory		
1/0	2 opto-isolated input Configurable as a trigger input or as a start/stop trigger 2 opto-isolated output Serial communication port² or Analog output² 4 – 20 mA		

Function	Description		
Encoder Input	Quadrature (AB) shaft-encoder inputs RS422/TTL Up to 5 MHz (20M tick rate) Backlash compensation		
Scan Control	Profile Trigger • Encoder input, Internal timer/counter Fixed Scan • External input, Software; Timer/counter Variable Scan • Part in place; Start/Stop pulse		
Unified Measurement Space	Intuitive GUI for rapid setup Up to 16 sensors Supports multiple sensors in side-by-side, circular and in-line configurations Combine red and blue laser models Supports models with different measurement ranges		
Power Supply	PoE via 8-pin X-code circular connector (optional) Separate power via 12M 17-pin connector +12V to 36VDC +/-10% with surge protection		
Enclosure	 Machined aluminum IP67 4 x mounting holes 		
Software	Microsoft® Windows® 10 (32/64-bit) compatible Linux 32/64-bit: Ubuntu/Debian, RHEL/CentOS/Fedora, SLES/openSUSE Kernel: 2.6.32 or higher Fully supported by Teledyne DALSA's software packages (bundled free): Sherlock 8.0 Sapera LT 8.60 (or higher), Sapera Processing 8.0 (or higher) RTL Linux: Teledyne DALSA GevAPI Framework (SDK) ver. 2.40 or higher 3rd party software: MVTec® Halcon® NI® Max/Labview® Cognex® VisionPro® Stemmer CVB Application development using C++ and Microsoft .Net (C++, C# or Visual Basic)		
Markings	• FCC Class B, CE, ICE • ROHS, China RoHS
